Vladivostok, Russia

## SUMMARY

If given a choice, my desired job title would be that of lead senior full stack engineer.

My seven years of experience in web, app development plus my education in professional and technical writing make me an ideal candidate for this position and have additionally prepared me to take on more leadership-oriented roles such as full stack engineer

I like to be in the back and front of tech hence my passion for web and blockchain development.

I put my heart and soul into every project I work on, going non-stop till it is brought to perfection.

My strongest attribute is my determination. I take on every challenge head-on and do what I need to accomplish my goals, even when the challenge is difficult.

My unique attribute is passion. I think without a passion for what you are doing, it is not possible to ideally perform your job.

Just thinking of programming as my hobby, I started my career for software development in the companies when I was studying at the Moscow State University.

This was an amazing experience for me to grow as an IT technician. I will never give up on my way. Thanks for reading!
